Beautiful surfaces.

PROSEAL XZ 160

PROSEAL XZ 160 is a trivalent black passivation specially developed for use on acid deposited zinc layers. It creates a uniform black passive film.

In combination with our SURFASEAL sealers, the appearance and corrosion protection are further enhanced.

ADVANTAGES OF PROSEAL XZ 160

- Especially for acid zinc layers
- No chromium(VI) compounds
- Uniform colour tone
- Long lifetime
- Suitable for rack and barrel application
- Low working temperatures (20 - 35 °C)
- Excellent corrosion protection in combination with our SURFASEAL PD 100

passivations/](http://www.kiesow.co.uk/products/passivations/)

As an international group of companies, we have been developing, producing and selling polishing agents, polishing wheels and polishing rings, industrial cleaning products (degreasers), process baths for electrolytic metal deposition and post-treatment systems (passivations/TOP coats) for more than 100 years.

We also supply phosphatings for pre-treatment prior to powder coating. Furthermore, we are also known as a trading company for basic chemicals, anodes and accessories.

We are the only system supplier to offer processes from polishing to final coating (sealers). Our products stand for decorative, functional and sophisticated finishes.
